PROFESSIONAL SUMMARY

Third-year Computer Science student driven by the goal of achieving financial independence through technology and entrepreneurship. Passionate about continuous learning and exploring software development, AI, automation, and data engineering through hands-on projects, internships, and hackathons.

WORK EXPERIENCE

Software Developer Intern | SR NEXT (Remote) [\[GitHub\]](#) [\[Certificate\]](#) **Apr 2026 – May 2026**

- Built an end-to-end Instagram influencer analytics pipeline processing 2,000+ influencer profiles, leveraging Python, Pandas, feature engineering, and ML-based ranking workflows.
- Designed semi-automated data collection and cleaning processes, improving dataset preparation efficiency and reducing manual effort by ~40%.
- Developed and deployed an interactive Streamlit dashboard to visualize engagement metrics, influencer rankings, and analytical insights.
- Performed large-scale data preprocessing, duplicate removal, feature extraction, and exploratory data analysis on influencer datasets.
- Collaborated with AI-assisted tools and automation workflows to accelerate data enrichment, categorization, and reporting across large influencer datasets.

Web Development Intern | InAmigos Foundation (Remote) [\[Live-Site-1\]](#) [\[Live-Site-2\]](#) [\[Certificate\]](#) **May 2026 – (2 Weeks)**

- Developed and deployed fully responsive, mobile-first websites for NGO initiatives using HTML, CSS, JavaScript, React, and Vite.
- Built reusable frontend components and optimized layouts for improved navigation, accessibility, and cross-device responsiveness.
- Implemented and showcased AI-assisted feature concepts including donation systems, volunteer registration forms, campaign pages, and impact dashboards.
- Managed project deployment and version control workflows using GitHub, GitHub Pages, and Vercel.

PROJECTS

Crowd Analyzer – ESP32-CAM, Flask, YOLOv8, Data Analysis [\[Demo Video\]](#) [\[GitHub\]](#)

- Built a real-time crowd monitoring system that streams image frames from an ESP32-CAM to a Flask backend for YOLOv8-based person detection and density analysis.
- Developed dynamic crowd-density heatmaps and automated threshold-based alert mechanisms for potential overcrowding scenarios.
- Designed a control-room style monitoring dashboard for visualizing crowd analytics and emergency notifications in real time.
- Selected by the Intel IoT Club for the SmartCity X Hackathon based on innovation and practical smart-city applications.

Duplicate File Finder – C++, Qt, Windows [\[GitHub\]](#)

- Developed a desktop application using C++ and Qt to recursively scan directories and identify duplicate files through hash-based comparison.
- Implemented duplicate detection and file management functionality to help users locate and remove redundant files.
- Built a native Qt-based graphical interface with folder selection, scan controls, and result visualization.

AlphaMap Secure Pipeline – Python, AES-256-GCM, Cryptography [\[GitHub\]](#)

- Developed a secure data compression and encryption pipeline using Python, combining custom dictionary-based encoding and bit-packing techniques to reduce storage and transmission overhead.
- Implemented AES-256-GCM encryption with PBKDF2-based key derivation to ensure confidentiality and secure key management.
- Integrated CRC32 integrity validation and modular processing workflows for reliable data transmission and corruption detection.

Binance Futures Trading Bot – Python, REST API, CLI, Security [\[GitHub\]](#)

- Developed an automated cryptocurrency trading bot in Python using the Binance REST API for order execution and account management.
- Implemented support for MARKET, LIMIT, STOP, and TWAP order strategies through a modular command-line interface.
- Integrated SHA256 HMAC request signing, secure API authentication, and comprehensive error handling for reliable trading operations.

TECHNICAL SKILLS

Languages: Python, JavaScript, C++, SQL, HTML, CSS
Frameworks & Libraries: React.js, Flask, Qt, Streamlit, Framer Motion, Vite
AI / Data: YOLOv8, Scikit-learn, Pandas, Data Analysis, Feature Engineering, Data Processing Pipelines
Tools & Platforms: Git, GitHub, Vercel, GitHub Pages, REST APIs, ESP32-CAM, Excel

ACHIEVEMENTS

Hackathon Finalist: Crowd Analyzer project selected into the Top 10 teams for the SmartCity X Hackathon by the Intel IoT Club. [\[Certificate\]](#)

National Ranker: Secured Top 15 out of 85 teams nationwide at the Anokha Build2Break Hackathon 2026 (Amrita University). [\[Certificate\]](#)

Statewide Shortlist: Placed in the Top 55 out of 650 teams across Tamil Nadu at the NIT Trichy x TCS Tata Centre for AI & ML Ideathon. [\[Certificate\]](#)

Ideathon Achievement: Advanced to the Top 300 teams out of 1,500+ teams in the FixForward Ideathon 2026. [\[Certificate\]](#)

CERTIFICATIONS

IBM SkillsBuild: Getting Started with Artificial Intelligence (March 2026). [\[Certificate\]](#)

EDUCATION

B.Tech in Computer Science and Engineering **2024 – 2028**
Amrita Vishwa Vidyapeetham, Ettimadai
